

ABSTRACT

The playback apparatus that plays contents recorded on the package medium 2 according to sequence information. Pieces of the sequence information are detected from a recordable medium
5 such as a HD 3 and a memory card. A dynamic menu is generated so as to display the detected pieces of the sequence information in association with the contents recorded on the package. Then, a user specification of one of the pieces of sequence information displayed in the dynamic menu is accepted. Finally, a plurality
10 of the contents recorded on the package are played according to the accepted piece of the sequence information.
